Dear customers, partners and friends,

At Erum, we have been thinking and rethinking the way we do things for almost a century. This non-conformist attitude has been passed down from generation to generation, and today we consider it non-negotiable in order to fulfil our responsibility to the planet, to the brands that trust us and to the people who form part of this team.

Today's world demands intelligent, efficient and sustainable solutions that help improve processes and reduce impact. That is why every hanger, every piece of visual merchandising and every logistics system we design is conceived from an eco-design and innovation perspective, not only to fulfil its function, but also to help our customers deliver with purpose and add value through detail.

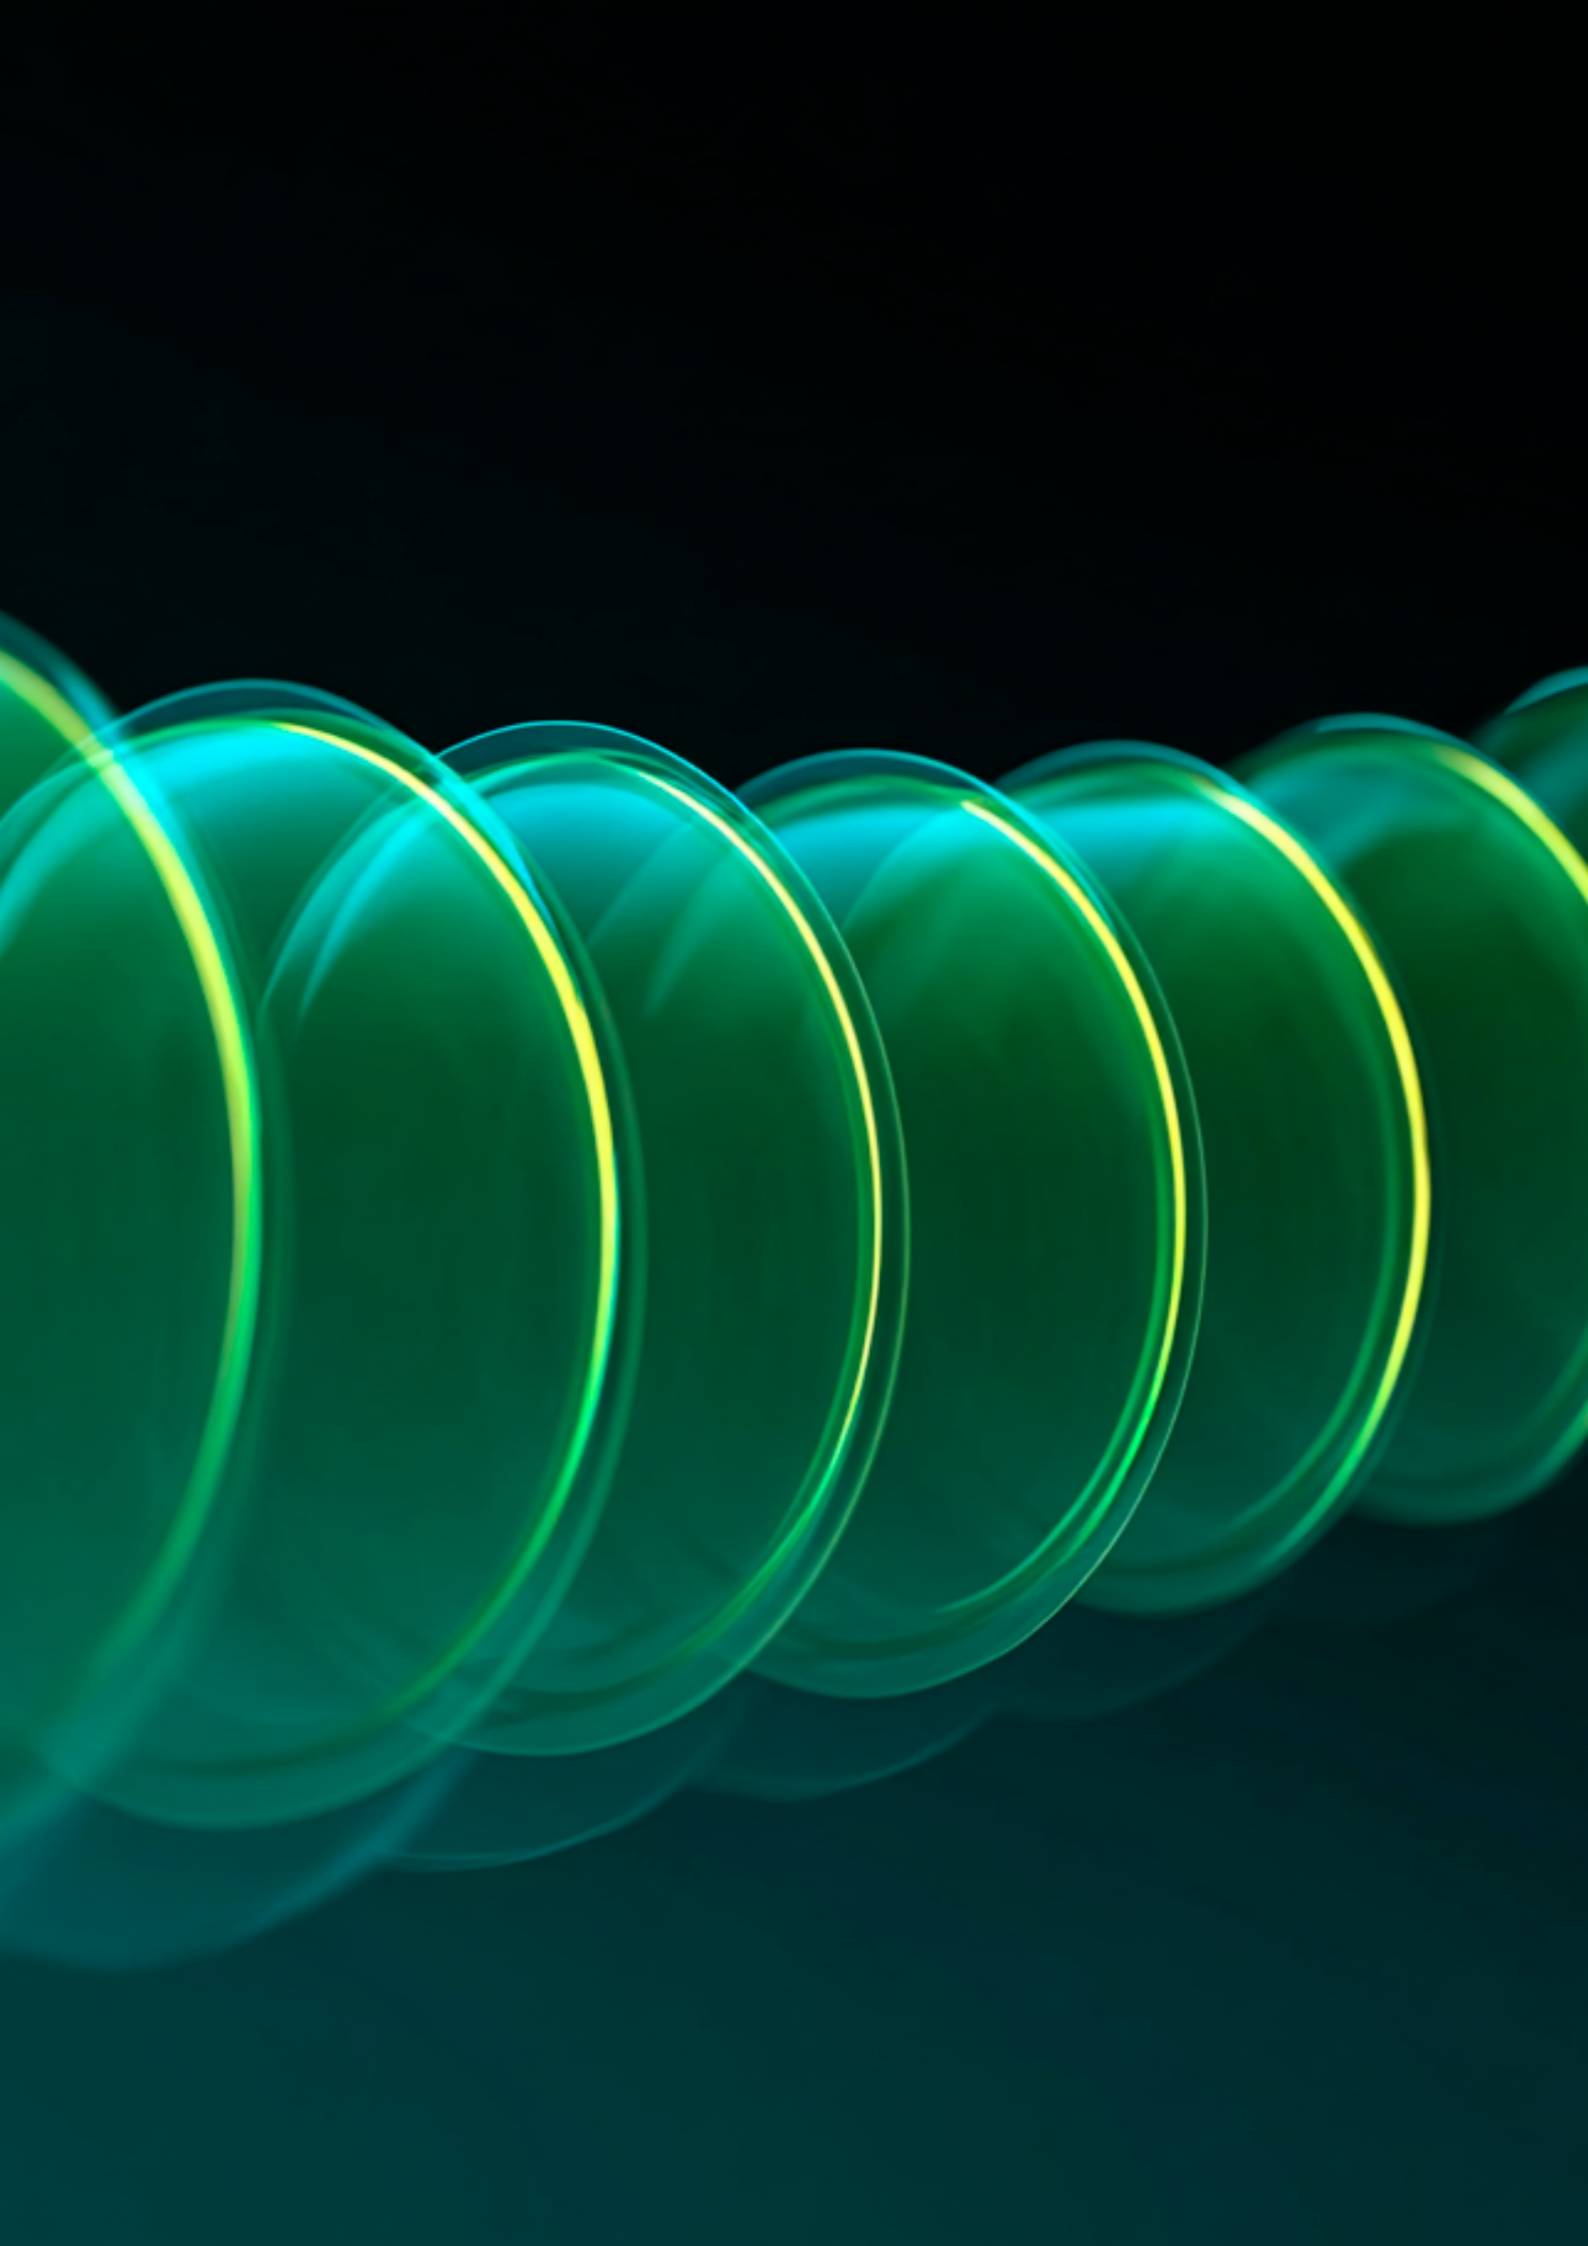

Being there for our customers, providing them with customised solutions that respond to their real challenges, is what motivates us to continue growing. And that is what we have done this year, reinforcing our commitment to sustainability and expanding our production capacity in different countries.

But beyond our achievements, what makes us most proud is the way we do it: with a vision for the future, with ethics, and with a team that never stops moving forward.

Thank you to those who trust, collaborate and accompany us. We will continue to transform the everyday into the extraordinary through honest design, responsible technology and a constant commitment to improvement.

Kind regards,

The Erum family

“There is only one way to become what they say is the most innovative circular project in the world: by turning it over and over in your mind.”

That's the good thing about practising **Circular Thinking: it makes you a non-conformist.**

We have been practising it, consciously or unconsciously, since 1920: exploring our own limits with the determination to overcome them every day.

Today, four generations later, we are present in more than 80 countries, we have a network of production centres in 16 countries and we have a team of 3,000 people who continue to **think and rethink** in order to shape a waste-free future.

Practising Circular Thinking.

At Erum, we are known for thinking things through thoroughly. And we love it, **because it is by thinking, rethinking, questioning and always taking every challenge in every sector** one step further that we have managed to become a global supplier capable of guaranteeing production at scale in multiple countries, complete traceability and verifiable ESG metrics.

Retail

A system designed for the speed and complexity of retail.

Retail moves fast, handles large volumes and does not tolerate friction. At Erum, we respond with a **comprehensive approach that supports brands throughout the entire cycle, offering eco-designed products manufactured using sustainable injection moulding**, ready to be reused, repaired or recycled thanks to reverse logistics and sorting processes that allow them to be reintroduced in the system.

A hanger that holds much more than just a garment.

In retail, hangers don't just hold garments, they hold up the entire operation. They accompany the product in-store, during transport and logistics, and determine times, costs and efficiency. At Erum, **we treat them as a key asset, designed to withstand the fast pace of fashion brands.**

When the hanger is effective, the operation flows. **Less friction, more control and more efficient processes at every stage.**

Gas Injection Lines

High-performance engineering. Real differentiation at the point of sale.

Solutions developed with advanced injection, gas injection and double injection technologies, which optimise structure, reduce weight and enhance brand identity in-store.

All lines incorporate eco-design from the conceptual phase, recycled materials and are 100% recyclable.

Essentials Lines

The essential architecture of retail

A timeless line, rich in references and designed to meet all market needs. It represents the classic hanger reinterpreted according to eco-design and industrial efficiency criteria.

Its strength lies in the breadth of its range, its adaptability to different segments and its ability to respond to large-scale international programmes.

Recycled and recyclable material in all lines.

03. ULine	71
04. OneLine	75

ClassicLine

The universal standard

The iconic retail hanger, with a solid and versatile architecture that caters to multiple categories and store formats. A comprehensive solution that accompanies the garment throughout its value chain.

It includes logistics hangers and shop hangers, ensuring consistency, efficiency and operational continuity from origin to point of sale.

Cross-cutting and widely recognised design

Specific versions for logistics and in-store display

High recyclability

Extensive range of references

Accessory hangers

Functional specialisation for high-detail categories

Solutions specifically designed for the correct display and protection of accessories such as belts, scarves, foulards, small textile accessories and fashion items.

Their development responds to three key objectives in international retail: maximising visibility, optimising shop space and ensuring secure fastening without damaging the product.

Manufactured according to eco-design criteria, with recycled and 100% recyclable materials.

Designed to integrate seamlessly with the rest of the ranges, providing aesthetic consistency and operational efficiency in all store formats.

Operational efficiency at every point in the chain

An ecosystem of components designed to expand the functionality of hangers, optimise in-store display and improve efficiency in warehousing and transport.

These solutions allow each system to be adapted to the specific needs of the product, market and channel, providing technical and operational consistency from origin to point of sale.

Developed according to eco-design criteria, with recycled and recyclable materials, in line with global strategies for circularity and resource optimisation.

Technical components for hangers: clips, anti-slip inserts, modular systems and customisation elements.

Display solutions for retail and warehouses: supports, adapters and organisational elements that improve visibility and density per linear metre.

Transport logistics accessories: fastening, grouping and protection systems that guarantee stability, reduce incidents and optimise loads.

Customise your hanger

Brand identity integrated into every detail

The hanger is one of the first points of physical contact between the brand and the consumer. Customisation transforms a functional element into a strategic communication and positioning tool.

We develop customisation solutions that reinforce visual identity, global consistency and differentiation in-store, while maintaining industrial efficiency and circularity criteria.

All options are integrated into the production process under quality standards.

Retail without limits.

Hooks

Choose the hook that drives your operation

The hook is the critical connection point between your product, your logistics system and your retail space. Choosing the right one has a direct impact on compatibility, efficiency and in-store experience.

We offer multiple configurations to adapt to the standards of each chain and international market:

With or without stop

With rotation or anti-rotation system

Different diameters according to technical requirements

Matt and gloss finishes, in different metals such as gold or silver

Options in different colours on request

Anti-theft system for hotels

Selecting the right hook ensures full integration in-store, stability in the warehouse, and operational consistency across all markets where your brand operates.

Standard Hook

∅1mm	∅mm	∅mm	∅mm
90	40	33	3
90	40	33	3,4
90	40	33	3,8
90	40	33	4
90	40	33	5

French Hook

108	36	44	3,4

American Hook

∅1mm	∅mm	∅mm	∅mm
110	38	50	3
110	38	50	3,4
110	38	50	3,8

Colour

Imagine your hanger. We develop it.

Colour and texture also build your brand. The hanger can become a direct extension of your visual identity.

We develop solutions in a wide range of colours, adapted to your corporate codes, collections or specific campaigns. We incorporate finishes and textures that provide differentiation and aesthetic consistency in any market.

Customised corporate colours

Combinations using double injection

Matt, gloss or soft-touch finishes

Technical or natural effects depending on positioning

From a minimalist line to a completely distinctive design, we transform the hanger into a strategic brand asset.

We work with you to design the solution that best represents your vision and your objectives.

Logos

Your logo, precisely integrated

The logo turns the hanger into a direct point of contact with your brand. Every detail communicates positioning, consistency and quality.

We offer different marking techniques tailored to your strategy and production volume:

Embossed

Debossed

High-precision pad printing

Each option is developed to ensure visual consistency, resistance to intensive use and compatibility with recycled materials.

Strategically integrate your identity into each market.

Tell us what you need. We will work with you to design the solution that best represents your brand.

Embossed

Debossed

Pad printed

Shall we go for a drive together?

We know that every brand is unique and that every market has specific requirements. That's why we take the time to think, rethink and mull over every project from a circular perspective.

Because applying Circular Thinking means integrating design, engineering, operational efficiency and sustainability from the outset in order to work on projects holistically: product, supply chain, point of sale and ESG objectives.

This allows us to guarantee:

Aesthetic and technical consistency

Structural and logistical optimisation

International scalability

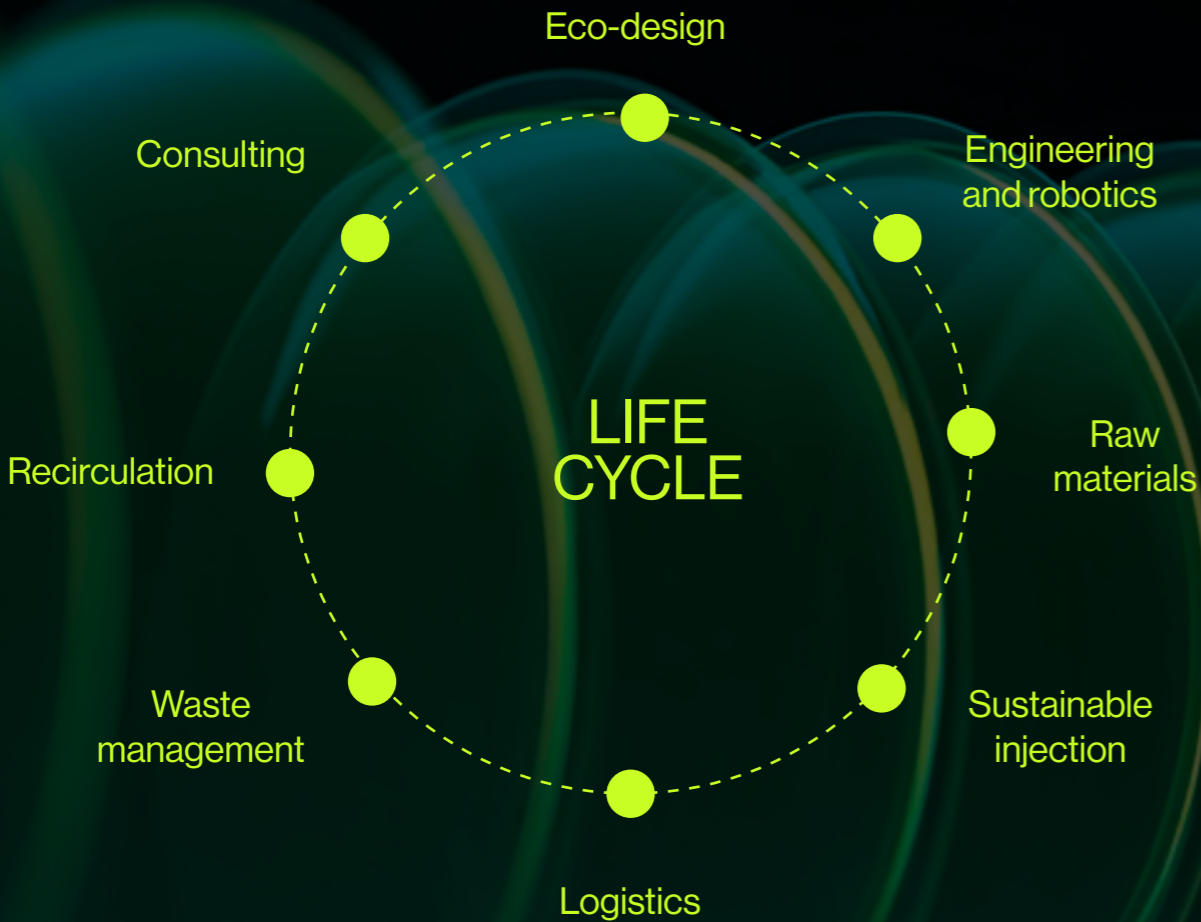

Traceability and circularity

We don't just manufacture hangers.

We design systems that fit your strategy and your needs.

Services

What if it were possible to close the circle?

From waste to resource

At Erum, we promote a model of true circularity.

The process begins with a **specialised consulting** phase, where we define the roadmap. We don't just design a product; we carry out **eco-design** that guarantees maximum performance and sustainability from the outset.

This vision is brought to life through **advanced process engineering**. The core of our **sustainable injection moulding** integrates industrial robotics solutions that optimise precision, reduce energy waste and ensure a highly efficient production system.

To power this system, we use high-quality recycled **raw materials**. Materials engineering ensures that the technical stability of the recovered resource is equivalent to that of virgin material, enabling a seamless circular transition.

Distribution is not just the end of the chain, but the beginning of the return. Thanks to our coordinated reverse **logistics**, we efficiently connect delivery with collection.

Finally, we close the circle with specialised **waste management**. We provide our customers with the control and operational efficiency necessary to transform each waste product into a new resource, thus guaranteeing an infinite life cycle.

A cycle open to your needs.

Step into the circle:

We can intervene at any stage of the cycle, integrating ourselves into your existing operations.

Recirculation

At Erum, we do not view recirculation as an isolated process, but rather as a comprehensive industrial system. **Our goal is to keep products and materials in use for as long as possible, returning them to the production cycle at their maximum value.** We connect logistics, sorting, reuse and recycling under a single operating logic to efficiently manage the return of hangers.

Our strategy begins with intelligent reverse logistics. **Structured and efficient collection is a game changer.** We integrate ourselves into our customers' daily operations to channel materials from the point of use to our treatment centres. **We optimise routes and flows to reduce travel, turning returns into a competitive and environmental advantage.**

Once received, **the materials pass through our sorting centres.** Under rigorous technical criteria, we decide on the optimal destination for each item:

Reuse: We identify hangers that are suitable for continued use.

Repair: We repair products that need adjustments in order to return them to the market.

Recycling: We transform material that has reached the end of its useful life into new, high-quality raw material.

We **prioritise reuse to reduce demand for new resources.**

The hangers we reintroduce into the system comply with the technical requirements to operate in demanding environments.

When a product's life cycle comes to an end, **we integrate it into recycling processes designed to recover maximum value,** ensuring the traceability and stability of the new resource generated.

Sectors

We apply our expertise in hangers so that no sector is left hanging.

Our know-how allows us to work as strategic partners alongside companies seeking operational efficiency, reduced environmental impact, high-performance industrial solutions and, of course, to make the world a better place, whatever the sector.

→ Retail

Our historical area. We manufacture hangers and accessories for large multinational textile companies, also managing their global programmes for the reuse and recycling of these products.

→ Road safety

We have launched smart cones or the LEDONE beacon, a V16 beacon with a circular economy approach

→ Home

We produce a wide range of household items, such as kitchen utensils and reusable tableware, using 100% recycled and certified materials.

→ Packaging

At Erum, we understand packaging as a strategic decision within the supply chain. We promote solutions that reinforce efficiency, traceability and competitiveness in demanding global environments.

→ Automotive

We design and manufacture high-precision technical parts, components and systems for vehicles, collaborating with leading brands to optimise the efficiency and durability of plastic materials in the sector.

→ Photovoltaics

Doing more with less also means generating energy. At Erum, we apply Circular Thinking to photovoltaic projects that optimise space, efficiency and sustainability.

Certifications

Circularity is built.
Trust is certified.

Quality

Circularity

Traceability

Social Responsibility

We eco-design **hangers**.
We manufacture **hangers**. We sell
hangers. We distribute **hangers**.
We use our own reverse logistics
system to collect **hangers**. We sort
hangers. We manage to reuse 70%
of the **hangers**. We reintroduce the
remaining 30% into the manufacturing
process to produce new **hangers**...

And what we think about most is
never leaving any customer **hanging**.
